Re: DEQ-WQ-WC-Materials
Polyethylene Distribution Box

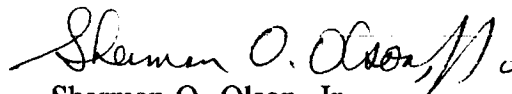

Dear Mr. Meyers:

Yesterday I received a sample of the 4HD2 distribution box and other fittings. The box has been reviewed for compliance with Oregon's distribution box standards, and I am pleased to advise you that it appears to comply with these standards. This box may be used in on-site sewage treatment and disposal systems in this state until further notice.

In addition to this box, Department has reviewed and accepted two other models of distribution boxes (9HD3 and 7HD2), and a drop box (6"DB). All of these must be identified with either your full business name or the assigned number 280. Other items manufactured by TUF-TITE, INC. that are used with these boxes, such as the various seals, plugs and risers, are also acceptable to the Department.

Thank you for providing examples of your products for our review. If I can be of further assistance, please call. My phone number is (503) 229-6443.

Sincerely,

Sherman O. Olson, Jr.
