Re: DEQ-WQ-WC-Materials
Polyethylene Distribution Box
Polyethylene Drop Box

Dear Mr. Meyers:

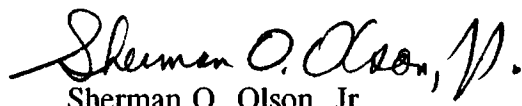

In follow-up to our phone conversation this afternoon, I am pleased to advise that your seven-hole distribution box (7HD2) has been reviewed and found to comply with Oregon's current distribution box standards (OAR 340-73-035). This box may be used in on-site sewage treatment and disposal systems in this state until further notice.

In past years the Department reviewed and accepted your drop box (6"DB) and the nine-hole distribution box (9HD3). These products continue to be acceptable for use in this state.

For your information I have enclosed Oregon's current standards for distribution and drop boxes. The standards require each box be marked with either your full business name, or a number assigned by the Department. The number assigned to products manufactured by TUF-TITE, INC. is 280.

Thank you for providing the information on your products. Please feel free to call if I can be of further assistance. My phone number is (503) 229-6443.

Sincerely,

Sherman O. Olson, Jr.
Environmental Specialist
On-Site Sewage Disposal Program
